Version 7.1 SP3 Patch 1 (May 2018) 4

Maintenance Changes

Blackbaud NetCommunity version 7.1 SP3 Patch 1 includes these changes.

Version 7.1 SP3 Patch 1 (May 2018)

The following issues were addressed in this patch release.

- This fix addresses an issue with processing Email Signup transactions when the constituent record is linked to a Blackbaud NetCommunity account. Previously, with the The Raiser's Edge plugin, when you attempted to process a signup request from the Email Signup part, an error message displayed stating that the The Raiser's Edge constituent was already linked to a Blackbaud NetCommunity user. Now, the error no longer occurs. (Work Item 802809)
- This fix addresses an issue where communication consent information was not being written to the constituent records in the Raiser's Edge. Previously, when you copied a Communication Consent part in Blackbaud NetCommunity and included the part on a form, the consent information was not written to Raiser's Edge. Now with this fix, the consent information is written to the constituent records as expected. (Work Item 961205)
- This fix addresses an issue where consent information wasn't being added to The Raiser's Edge when the consent source was deleted. Previously, if you deleted the consent source from the The Raiser's Edge, consent options selected on forms that included the Communication Consent part were not passed to The Raiser's Edge. Now, this issue has been resolved. (Work Item 964758)
- This fix addresses an issue where reCAPTCHA was intermittently failing. Previously, an "Unable to load the reCAPTCHA image" error would display on forms where reCAPTCHA was configured. Now, the error no longer occurs. (Work Item 970552)
